

BitBite - Short Test Case Report

Software Testing Documentation | Prepared for Final Project

Project Name	BitBite - Health & Lifestyle Management System
Testing Type	Functional Testing, Database Update Testing, Validation Testing
Platform	Web Application using HTML, CSS, JavaScript, PHP, MySQL, XAMPP
Test Environment	Localhost / XAMPP Server
Report Date	14 June 2026

Objective

The purpose of this test case report is to verify that the main BitBite website features work correctly and that user actions are properly saved, retrieved, or validated through the PHP backend and MySQL database.

Test Cases

TC ID	Feature	Test Scenario	Expected Result	Status
TC-01	User Registration	Create account with valid name, email, password and matching confirm password.	Account is created and user data is saved in database.	Pass
TC-02	Password Validation	Enter password and confirm password with different values.	System shows password mismatch message and stops registration.	Pass
TC-03	User Login	Login using registered email and correct password.	User is logged in and redirected/allowed to use the dashboard.	Pass
TC-04	Food Log	Add a food item with calories and meal details.	Food log is inserted into database and visible on website.	Pass
TC-05	Water Log	Add daily water intake amount.	Water intake record is saved successfully.	Pass
TC-06	Weight Log	Submit current body weight value.	Weight record is stored and can be used for progress tracking.	Pass
TC-07	Sleep Log	Add sleep duration and date information.	Sleep data is saved in the sleep log table.	Pass
TC-08	Shopping List	Add a grocery/food item to shopping list.	Item is saved and displayed in the shopping list section.	Pass
TC-09	Research Hub	Open or add research hub content.	Relevant health information is shown or stored correctly.	Pass
TC-10	Coach/Nutritionist Hire	Submit hire request for yoga coach or nutritionist.	Hire request is stored in database with user details.	Pass

Summary

Total Test Cases	10
Passed	10
Failed	0
Overall Result	The tested BitBite features are working as expected in the local XAMPP environment.

Conclusion

Based on the executed test cases, BitBite successfully handles core user activities such as registration, login, health logs, shopping list, research hub access, and coach/nutritionist hire requests. The project is ready for demonstration and final submission testing.
